Blood Sampling Device: Usability Study
Queen Elizabeth Hospital, Birmingham 21st November 2019

Are you a healthcare professional trained in phlebotomy?

Or do you regularly have your own blood taken?

We would like your opinion!

We are carrying out a usability study on a blood drawing kit which aims to **improve comfort and efficiency**. It provides a method for the patient to carry out the procedure **themselves** and send the sample for analysis by post. Your views are key to improving the medical device for **better patient and HCP experience.**

What would we like you to do?

We would like you to attend a **45 minute session** which will involve a **demonstration, brief training**, and for you to **try the device for yourself**. You will then be asked to give **feedback** and make **recommendations**: we would like to understand what would help you and your patients!

When and where will this take place?

On the **21st November** at the **Queen Elizabeth Hospital (Heritage Building)**, Birmingham in a dedicated facility designed to test new medical devices. We are a project team in **Innovation** to support the development of **new medical devices and technologies.**

If you want to register your interest and to book your time slot, please contact our team by **email: mdtec@uhb.nhs.uk or telephone: 0121 371 8540**

Further questions:

Is this research?

This study is research: part of medical device usability testing (for further development), but it is not a clinical trial.

Will I get paid?

We cannot offer reimbursement for time, however tea / coffee and biscuits are on us! We can also provide you with a certificate of participation. Please let us know in advance if you would require one.
